PROFESSIONAL SUMMARY

Full Stack Java Developer with hands-on experience designing Spring Boot microservices, REST APIs, and Angular interfaces for a SaaS manufacturing ERP platform. Built a CRM module end to end across 6 business workflows, authored a shared backend library adopted by multiple services, and implemented API security with Spring Security, Keycloak, JWT, and OAuth2.

TECHNICAL SKILLS

Languages: Java, SQL

Backend & Microservices: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices, API Gateway, Eureka (Service Discovery), Swagger/OpenAPI, JasperReports

Frontend: Angular, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Responsive Web Design, REST API Integration

Databases & Storage: MySQL, Redis, Liquibase, AWS S3, Schema Design & Migration, Query Optimization

Messaging & Event-Driven: Apache Kafka, RabbitMQ

Security & Authentication: Spring Security, Keycloak, JWT, OAuth2, Role-Based Access Control (RBAC)

Testing & Quality: JUnit 5, Mockito, JMeter, Postman, Unit Testing, Integration Testing, API Testing, Performance Testing, Test Case Design

DevOps & CI/CD: Git, GitHub, Docker, Maven, Linux, GitHub Actions, Jenkins

Concepts & Architecture: OOP, SOLID Principles, Design Patterns, MVC, SDLC, SaaS ERP, Modular & Reusable Architecture, Clean Code

PROFESSIONAL EXPERIENCE

Full Stack Java Developer — Nyaalkaran Tech Private Limited, Ahmedabad

Mar 2026 – Sep 2026

SaaS-based microservices ERP platform for manufacturing operations (nyaal.cloud)

- Developed and deployed Spring Boot microservices for a SaaS manufacturing ERP, containerized with Docker and routed through an API Gateway with Eureka service discovery for independent deployment and scaling.
- Engineered the CRM module end to end — data models, service layers, and REST APIs documented with Swagger/OpenAPI — spanning 6 business workflows (Lead, Account, Contact, Opportunity, Quotation, Booking Order) with entity relationships, validation rules, and status transitions.
- Integrated AWS S3 for document and attachment storage, implemented activity tracking and customer-communication workflows, and generated quotation PDFs with JasperReports.
- Built Angular components for CRM data entry and workflow management with field-level validation, REST API integration, and responsive layouts using Bootstrap.
- Authored a reusable backend common library — shared pagination, sorting, search, filtering, validation, DTOs, and entity utilities — adopted across multiple ERP services to eliminate duplication and enforce consistent cross-service patterns.
- Secured APIs and Angular routes with Spring Security, Keycloak, JWT, and OAuth2, enforcing role-based access control (RBAC) across all microservices.
- Managed MySQL schema versioning with Liquibase, integrated Redis for application-level caching, maintained Hibernate entity mappings, and optimized database queries for performance.
- Wrote unit and integration tests with JUnit 5 and Mockito, verified API contracts in Postman, and load-tested critical endpoints with JMeter.

PROJECTS

Nyaalkaran ERP — SaaS-Based Microservices Manufacturing ERP

Spring Boot, Microservices, API Gateway, Eureka, Keycloak, Angular, MySQL, Redis, AWS S3, Docker, Liquibase

- SaaS ERP platform for manufacturing operations built on Spring Boot microservices with API Gateway routing, Eureka service discovery, and Keycloak-secured role-based access. Includes a full CRM module spanning 6 business workflows and a shared backend library adopted across services.

EDUCATION

Master of Computer Applications (MCA) — Gujarat Vidyapith, Ahmedabad, 2024–2026, CGPA 6.24

Bachelor of Computer Applications (BCA) — BDKM BCA College, Palanpur, 2021–2024, CGPA 7.44
