PROFESSIONAL SUMMARY

Full Stack Java Developer with hands-on experience in product-based and SaaS environments. Currently building and maintaining a microservices ERP platform for manufacturing operations — develops secure Spring Boot REST APIs, owns the CRM module end to end, and wrote the shared common library several ERP services now depend on. Previously contributed to a catering software product, resolving production bugs, modifying Jasper reports, and supporting Spring Boot backend services. Applies object-oriented programming, MVC and common design patterns to keep services modular and maintainable, and debugs issues across API, service and database layers.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, HTML5, CSS3
Backend: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, REST APIs, Microservices, API Gateway, Eureka service discovery, JasperReports
Frontend & Security: Angular, Bootstrap, responsive UI, Keycloak, JWT, OAuth2, role-based access control (RBAC)
Databases: MySQL, Redis, JPA / Hibernate, Liquibase, schema design and migration, query optimization
Concepts: Object-oriented programming, software design principles, design patterns, MVC, SDLC, modular and reusable architecture, clean and maintainable code
Tools & Practices: Git, GitHub, version control, Maven, Postman, Docker, Linux, API testing, debugging and troubleshooting, refactoring

PROFESSIONAL EXPERIENCE

Full Stack Java Developer — Nyaalkaran Tech Private Limited, Ahmedabad **Mar 2026 – Present**

SaaS-based microservices ERP platform for manufacturing operations (nyaal.cloud)

- Develop and maintain Spring Boot microservices across ERP modules, keeping each service modular so it can be extended and released independently.
- Design secure REST APIs for CRM and ERP business workflows, applying consistent validation, pagination, sorting and error-handling standards across endpoints.
- Built the CRM module end to end — Lead, Account, Contact, Opportunity, Quotation and Booking Order flows, plus attachment handling and customer email communication.
- Wrote a reusable common library — pagination, sorting, filtering, validation, DTOs, shared base classes and utilities — now used across multiple ERP services, removing duplicated code and standardizing how new modules are built.
- Secured services using Spring Security, Keycloak and JWT / OAuth2 with role-based access control, and integrated the APIs with Angular front-end modules.
- Manage MySQL schema changes and migrations with Liquibase, working through Hibernate / JPA mappings and optimizing queries where needed.
- Troubleshoot backend and front-end defects: analyze failing API responses and database errors, verify endpoints in Postman, and refactor the affected code rather than patch around it.

Junior Full Stack Java Developer — Qdev Technolab Private Limited, Ahmedabad **Dec 2025 – Mar 2026**

Product-based company — Jucas, a catering management software product

- Contributed to Jucas, a catering management software product built on Spring Boot, supporting backend development and maintenance of core business modules.
- Identified and resolved production bugs across the application — diagnosed issues in API logic, database queries, and front-end integration to improve product stability and user experience.
- Designed and modified JasperReports for catering operations — invoices, order summaries, and business reports — ensuring accurate data rendering, formatting, and layout per client requirements.
- Implemented report change requests by updating SQL queries, report templates, data mappings, and layout configurations to meet evolving business needs.
- Collaborated with senior developers and QA to triage defects, reproduce issues, and deliver fixes within sprint timelines.

PROJECTS

Nyaalkaran ERP — SaaS-Based Microservices Manufacturing ERP | *Spring Boot, API Gateway, Eureka, Keycloak, Angular, MySQL, Docker*

- Independent Spring Boot microservices behind an API Gateway with Eureka service discovery and Keycloak-secured role-based access; contributed backend services, shared architecture and Angular-integrated modules.

CRM Module — Sales and Customer Management Suite | *Spring Boot, Spring Data JPA, REST APIs, Spring Security, MySQL, Angular, JasperReports*

- Lead, account, contact, opportunity, quotation and booking-order workflows with attachments and activity tracking; list APIs built on reusable pagination, sorting and search, plus quotation PDF generation with JasperReports.

Reusable ERP Common Library — Backend Standardization | *Java, Spring Boot, Spring Data JPA, Maven*

- Shared pagination, sorting, search, validation, DTO, base-entity and utility components consumed by multiple ERP services, standardizing backend patterns and cutting duplicated code.

EDUCATION

Master of Computer Applications (MCA) — Gujarat Vidyapith, Ahmedabad 2024 – 2026 | CGPA 6.24

Bachelor of Computer Applications (BCA) — BDKM BCA College, Palanpur 2021 – 2024 | CGPA 7.44
